

SKREDDY PEDALS™

# *Little Miss Sunshine™*

## **Optical Phase Shifter with a classic mid-70's voice**

Sonically modeled after an original, vintage 1974 MXR Phase 90\* "script logo" phaser, but not a clone by any means, using optical electronics instead of FETs, with added headroom, lower distortion, and more transparent eq. Lush yet subtle; neither bass nor treble nor volume is boosted or cut. At high speed, it will do a nice close-mic'ed rotating speaker type sound, at low speed will add deep, slow-moving color and dimension, and at medium speed will make your sound dance and shimmer.

### **Controls:**

***Speed:*** Goes from almost standing still to super fast rotary spin

### **LED Indicators:**

**Bypass (Green)** indicates when circuit is active, off when in true-bypass

**Speed (Red)** indicates the speed of the sweep, always active

### **Power**

You must supply external power through an adapter which supplies 9 volts of DC power (note: only 9 volts on this one; not compatible with higher voltages). All Skreddy Pedals accept the industry-standard 9v DC plug (5.5mm barrel x 2.1mm center coax), with the center being negative and the barrel being positive. Please use a quality, regulated, filtered power supply. **Current consumption: 26mA**

### **Service**

Email Skreddy Pedals at [marc@skreddypedals.com](mailto:marc@skreddypedals.com) if your pedal needs repair.

\* Skreddy Pedals has no affiliation with MXR and does not own the trademark for the term Phase 90.
