

SKREDDY PEDALS™

Top Fuel

High-gain tone that retains articulation at all settings

Sustain: This controls the intensity of the distortion. The sweetest, fuzz-like tones are at the highest settings of the sustain control

Volume: This sets the output volume. You can adjust your Skreddy Pedal to roughly the same volume as your bypass signal (aka “unity gain”) or you can boost your signal for a fatter tone.

Tone: This is not your standard tone control. The Top Fuel emphasizes the midrange, where your guitar’s primary focus and articulation are found. This tone control allows you to fine-tune the sound from darker and richer (left) to brighter and more cutting (right).

Power

9v battery is not included. To install or change a battery, remove the bottom cover using a Phillips screw driver. To prevent a battery (if you use one) from draining while the pedal is not in use, remember to un-plug the input cable from the pedal’s input jack. The battery is also disconnected from the circuit when an adapter is plugged into the DC jack.

We include a protective cover on the battery clip to prevent it from shorting against anything inside the box if you do not use a battery.

You may also supply external power through an AC adapter. All Skreddy Pedals accept the industry-standard 9v DC plug (5.5mm barrel x 2.1mm center coax), with the center being negative and the barrel being positive. Please use a quality, regulated, filtered power supply.

Service

Email Skreddy Pedals at marc@skreddypedals.com if your pedal needs repair.
